Getting This Planet Into Motion: Obama Out; Glass-Steagall, NAWAPA In

Lyndon LaRouche was the special guest on the LPAC-TV Weekly Report Sept. 16, hosted by John Hoefle, and joined by EIR Editor Nancy Spannaus. Here are LaRouche's opening remarks; the complete discussion can be viewed at: <http://www.larouchepac.com/node/15804>

John Hoefle: Hello, welcome to the LaRouche PAC Weekly Report. Well, Lyn, welcome back.

Lyndon LaRouche: Yes, I'm back. And I had a good time, naturally, celebrating Helga's birthday and mine, in sequence, at separate weeks. We managed to get that close together. And we had some nice music provided by friends of ours there, on these occasions, and it was nice, very nice. Travel is tiring, as usual, and I'm back safely.

But anyway, the return to, I think a memorable change in the tempo of developments in the United States, which is unexpected, but the showing by Rachel Brown in Massachusetts in the 4th District [Democratic primary against Rep. Barney Frank], really is much more significant than even the tally that she got would show. First of all, she broke the ice, and there was a real turnout to try to block her from getting too significant a vote. But she is now continuing the campaign, because under the PAC [LaRouche Political Action Committee] we do that, you know; she is continuing on the question of Glass-Steagall. So, she's going to keep the full force of the campaign going in Boston, on the Glass-Steagall issue, which is going to cause pain in the right places.

But the whole system is coming down. We are in that point of collapse. And what's happened this election has forced some things to the surface, which were coming to the surface; and that's the way human beings are: They deny something, and then, what they have been trying to cover up and deny happens. Then they can't deny it any more; and then they all suddenly make

EIRNS/Christopher Lewis

"We are at a point, where right now, we could stop the disintegration of the U.S. economy," LaRouche stated, if we make a radical change in the system, in the direction of high energy-flux-density investments, like NAWAPA.

an adjustment, not to conceal reality, but to conceal the fact that reality has exposed them to what they were really doing all along! And we are in that situation.

Our overall situation as a PAC is rather strategic, at this point. With Kesha [Rogers] in Texas, what we're doing on the West Coast in California [with Summer Shields' campaign against House Speaker Nancy Pelosi], and what's continuing in Boston, and the New England area in general, is still quite significant.

Glass-Steagall: A 'Casus Belli'

Now, we are headed for a point, which is very early in coming on, in which the whole system goes under, unless we have Obama out. As we have said before, there are two measures, which could change and reverse this crisis: One is Glass-Steagall. That is practically a *casus belli* with the British right now. But the introduction of Glass-Steagall would immediately eliminate the bailout process, which would mean that the Federal government would no longer be called upon

FIGURE 1

The 20-Inch Rainfall Line

The region west of the 20-inch rainfall line in the U.S.A. is in a breakdown process; it can be restored with NAWAPA, which will increase, by a factor of 2.7 times, the amount of water we are putting through the Biosphere.

for bailout of the financial community, the parasites. And thus, we could put up money, as credit, for backing a project which would actually stimulate the entire U.S. economy.

If we launch the NAWAPA project, which we have been pushing for action now, and we have made some modifications—not in the basis of the original NAWAPA design, though there is a suggestion of going for nuclear power, where they were using water; because even though the system of NAWAPA's design would have worked on water alone, water power, the pumping, and the net result, it's better to use the water power downstream in other ways, and use nuclear power to drive the system, which gives us new dimensions.

Now, what we are doing, though, which is more significant than that, is, we actually are entering space, the space program, with NAWAPA. Because, what we will be doing, we will be changing the relationship of the control of the way that space is defined within our system. That is, we are not in direct connection to the Sun. We've got a big layer of oxygen up there, which is ionized oxygen on the surface, and we are protected from a lot of solar radiation, which would otherwise kill us and prevent us from doing things. So the planet has evolved, with an oxygen system, which enables life in itself to take on new forms.

If we increase the control of water, even in the United States, even in the U.S./Canada area, we increase that, we are going to change the environment of the United States. That is, the amount of water we are conserving, in terms of the water which is going on too soon, into the Pacific, and into the Arctic Ocean—by diverting it for a short time through this system, that increase in the water system, will be multiplied by a factor of 2.7 times, for the United States as a whole.

Now, we are in a situation, where the entire western area, west of the 20-inch rainfall line, is now collapsing: It's now in a breakdown process, agriculture, everything. This will stop it. This will mean, now, we will have rainfall going from the Pacific, a pattern from the Pacific to the Atlantic, which will now be increased by a factor of 2.7 times by the amount of

water we're putting through the NAWAPA process.

Now, this will then increase, as we get trees, more trees, in this area, and so forth, as we just take all the solar panels and destroy them, because they're not safe for human beings; you put them on top of your house, you're nuts! Because if the fire ever starts under your roof, with a solar panel, there is nothing the firemen are ever going to do for you. You're doomed. And if you've got solar panels in the neighborhood, on the adjoining houses in the neighborhood, or nearby houses, then the whole neighborhood is going to go. And this is something which is really a factor which people are concerned about in Germany, right now, where the solar-panel fanaticism is wild. And these bird-killers called windmills are actually, really, a waste of time! I'd rather have the birds.

So therefore, we are at a point, where the NAWAPA project would actually, at a minimum, have a chain-reaction effect on employment, in which you would not be getting dumb jobs—which is the best that you will ever get out of an Obama—not dumb jobs, but these are highly skilled forms of employment. They command high pay, justly so, and the investment is capital intensive, which means that the amount by which the economy is increased in its level, is really a total reversal, by an order of magnitude, of 3-4 million jobs, largely

NASA

It is time to return to the Moon, which will become a base for future travel to Mars and beyond, as well provide abundant supplies of the isotope Helium-3, for nuclear fusion power. Shown: an artist's conception of astronauts exploring the surface of the Moon.

skilled jobs, supported by other jobs.

So it means you suddenly reverse the depression process, and you go into a recovery.

We're on Our Way to the Moon Again

Now, this is sometimes compared with what happened with the TVA, in the sense that, in a very limited way, the TVA was a precedent which inspired this approach. But this goes way beyond anything imagined by the TVA. Because, by this time, we are getting actually into space: Because what we're controlling, with this kind of process, we're controlling the total environment of Earth underneath this layer, this protective layer. Really, at this point, we're actually, instead of controlling the planet from inside the atmosphere, we're controlling the thing from the outside: We're going to the top of the system, and controlling it from there.

And, we're on the way to the Moon again, and we're on the way to accelerated exploration of the Mars terrain, foreseeing two or three generations from now, 50 years from now, we can probably put something, in terms of human activity, on Mars. We can probably get

started on that sooner, but we have to develop some kind of artificial environment on Mars, which is suitable for human beings, before we can actually put human beings there. In the meantime, we will be putting a lot of things up there.

We are at a point, where right now, we could stop the disintegration of the U.S. economy. We are now in a breakdown crisis. In a matter of weeks, or something in that order of magnitude, we could have a general breakdown crisis in the United States. There never will be a recovery, of the United States, or Europe, or any part of the Americas, under the present system. If we do not make a radical change in the system, in the direction of high energy-flux-density investments, and projects of this type—and the only project we really have available of this type is NAWAPA. Because NAWAPA means you are going to be moving concrete and other things, and other supplies, by new railroads, which are built for this purpose, for heavy loads. You take the amount of concrete we have to pour, on dams, on NAWAPA, take the amount of steel, the other things that go into this; the fact we have to move people in

there, in Idaho—Idaho is a big concentration of this whole operation—means that we have started an instant recovery of the U.S. economy! Because the influx of Federal credit into launching a NAWAPA program, installation, and the development of the rail systems, which we need anyway, which will support our doing that, with the cooperation of Canada and Mexico, with that, we have broken free of the depression. It's a breakdown crisis, which is coming on fast, and without this measure, there is no hope.

Obama Must Go!

So, that's where we are. We now have a situation where the breakdown crisis, political breakdown crisis, has caused all kinds of funny things. Like this past week, the recent development was, that the Republican Party's little game backfired on them—and I knew it was going to, because it's not a serious game. But the Republican Party itself is discredited, because it's been a reigning party, along with the Democratic Party, for this whole entire period of ten years! Since George W. [Bush] came in! So, now, everybody *hates* the incumbent parties! And it's very difficult to find a Member of Congress who is liked by their constituents in either party, nationwide, in the Federal government, even state and local government. We saw that again.

So, now you're in a position, where there is no credibility for the parties, as they've been constituted. Obama has killed the Democratic Party, that was the finishing touch. Before that, you could blame George W. Bush. Now, you can't blame George W. Bush. He's now in the bath, he's gone! He's not a factor any more!

So, we're at the point where we have to, in very short order, and I think within weeks, *Obama must leave, within weeks*. He is getting very close to the point that he's going to be thrown out. In some way, a nice way, maybe mental breakdown, Woodrow Wilson-

White House/Pete Souza

"Obama has killed the Democratic Party," LaRouche stated. "He's now in the bath, he's gone! He's not a factor any more!"

style, that sort of thing, which he's susceptible to right now. But because, without getting Obama out, you will never get Glass-Steagall. If you don't get Glass-Steagall, you'll never get a recovery of the U.S. economy. If the U.S. economy goes down, Europe will go down. If Europe goes down, Russia will go down. If Europe and Russia go down, then, Asia goes down. This whole planet can go into a dark age, and the objective of some people, as Prince Philip and Prince Bernhard, now dead, proposed, is to reduce the world's population down to less than 2 billion people.

And under this kind of condition, if we don't get a change of this type, and we don't have a long time to think about it, we have to have, before Christmas, we have to have the President's reputation hanging on the Christmas tree, where people will take pot shots at it. Well, you gotta put 'em someplace! So, he can be the Santa Claus or something.

But anyway, we've got to get him out of the picture, and he's about ready to put himself out of the picture. We're at a breaking point.

The problem we have—and with my forecasting expertise, I can say this, because other people on forecasting expertise are a little bit em-

barrassed these days!—is that, we are at a point, where history is actually built up to an explosive point. And it's like the time before the nitroglycerine exploded, but the nitroglycerine was there all along, and it was being heated. And when it got to a certain point, it blew up. So you don't say that the event occurred when the nitroglycerine blew up. The problem existed when the nitroglycerine was there, and being heated up.

The problem now, goes back to what? It goes back all the way to—you could take points on this: You got the killing of Kennedy, and the killing of Kennedy had only one motive: that he was blocking the launching of a ten-year war in Indo-China, which would have broken the power of the United States, and *did* break the power

of the United States. The Vietnam War, a war which should never have happened, and would not have happened if Kennedy hadn't been killed, because he, and MacArthur and others would have prevented it from happening; they were agreed on that. Eisenhower would have supported that. We would have not gone into a land war in Asia, it would not have happened.

But we went into a land war in Asia, because the President was killed. And now we've lost the United States. Based on the effects of the Vietnam War, in 1971, between '68 and '71; '71-'72, where the entire system was changed. The United States was then a broken nation. And we never recovered from that. Just to make sure, what Carter did really destroyed the gut of the nation. And we had a slow rot under Reagan. And we had an accelerated rot under the Bush family. Clinton actually, in a sense, stabilized the thing, relatively speaking, under conditions of corrosion, but, now that's the situation.

So, this has been going on, actually, since Kennedy's assassination: this process of destroying the United States, under the direction of the British. It was always a British policy. And we are now at the point, that the whole world is now going into a breakdown crisis.

We have a chance to turn it around. The only way you can turn it around: You have to turn the United States around or it won't work! There is no such thing as a Russia-China plan, or a European plan, or a British plan, that is going to stop this crisis. If you don't stop it in the United States, you are not going to stop it. If the United States goes under, as it can before Christmas, in that case, the entire world goes into a chain-reaction collapse, and you go into a dark age for all humanity for a long time to come.

So the question is, are there are enough people, smart enough, and with the guts, to make the change now, that has to be made? That is our challenge. And that implies a lot of other things we could discuss, but that to me, in the short, that *is* the situation: We are now in a breakdown crisis. It's not a depression, it's not a recovery, it's not a slow this, it's not a slow that, *it's an absolute breakdown crisis*. When you look at the ratio between the total amount—the rapidly increasing amount—of inflation, of worthless currencies, worthless debt obligations, and the shrinking of the actual throughput, of income; when you get the states bankrupt; where the states are collapsing and disintegrat-

The planetary economy is disintegrating. The solution, as LaRouche has reiterated, is the NAWAPA principle, extended worldwide, as an engine for reshaping the entire Biosphere to mankind's benefit.

LPAC

ing—Harrisburg, Pa. is a symbol of what's happening all over the nation: The nation is being now destroyed! And if you don't get Obama out, you're not going to be able to do anything, to save the save the nation. So, *Obama must go, now!*

And that can be arranged. He's in an emotional breakdown crisis, now anyway. And give him a sixth round of golf everyday, and he'll be occupied and won't bother us any more.

But, we are at that point.

We Have the Solution

That's where we stand. We stand at a point, this is actually, to anyone who is listening, we are now in a general breakdown crisis process of the entire planet. Right now, the breakdown crisis is located in the Trans-Atlantic region, especially the northern Trans-Atlantic. But don't kid yourself about Brazil: Brazil is a goner,

too, as we know. When the Inter-Alpha Group banking system goes, Brazil goes. The government and everything else goes. The whole continent goes into a mess. Africa is already in that mess.

So, what we have, we have this process. We also have a process for Africa: If this goes through, the United States, and Russia, and China, and India, should be key nations in supporting a view of how to get this planet into motion. We have Africa, we have a possibility, centered on Sudan, the Chad area, and Congo. If we build up Lake Chad, we do something very like a small NAWAPA: We take the Congo River, which has a vast surplus of water going through it, into the ocean. We can direct that by taking a side trip: We pump it across the mountain range into Chad, we build up Lake Chad, and build the railway systems and other things that go with this development. You will then begin to build a focal point of actual recovery in Africa, in this area. Other nations around this area, will benefit. So we will then have a formula started for all of Africa.

Russia: We need the raw materials which Russia can develop in the Arctic or the sub-Arctic region, for China and for India, and for other countries. This means de-

veloping the rail system of Russia, and putting the Russian science of the Vernadsky tradition back to work. And Ukraine as well has some of this scientific capability, though they lost a whole generation in the post-1989 period.

And so, with these forces, with capable forces in China, which has to go through about 30 years of development before it can be stabilized; but, if it's part of a system, it can be stabilized now.

India has a tremendous poverty problem, which requires now, thorium reactors, the thorium system, to get the power in there, to develop the poor regions of India. And we can have Africa, northern Eurasia, Asia in general; and Germany under these conditions, would come in immediately. Germany is not much of an economy internally today, but it's an export economy. Its remaining industrial and related power is what it exports as high technology, or relatively high technology, to other countries. So Germany could adapt to this very nicely, if Russia and these other countries are developing, they will have plenty of markets to revive and build their economy.

And that's where we stand.
