Schiller Institute Strasbourg Conference

Our Most Urgent Task Is To Prevent Thermonuclear War!

by Kevin Gribbroek

On July 8–9 the Schiller Institute convened an international conference in Strasbourg, France, titled “On the Verge of a New World War: European Nations Must Cooperate with the Global South!” With over 200 participants from 15 different countries, the purpose of the conference was to facilitate deliberations on the creation of a new security and development architecture; a New Paradigm of peace through economic development for all nations and all peoples of the world. Of universal recognition by participants in the conference, regardless of political ideology, was that the greatest obstacle to achieving this goal is the imminent threat of thermonuclear extinction of the Human Race.

With the evil, decrepit trans-Atlantic financial system collapsing under the weight of 2,000 trillion dollars of unpayable debt, the demonic oligarchs behind that system, desperate to maintain hegemony—their so-called “rules-based international order”—are using Global NATO to target Russia and China, the two most powerful nations of the “Global Majority,” to *prevent* the rise of a New Paradigm. NATO’s Ukraine proxy war against Russia represents the most immediate, but by no means the only trigger for what could become thermonuclear Armageddon.

Given that as backdrop, participants of the Strasbourg conference, at the end of the proceedings, endorsed a resolution warning against the danger of thermonuclear war, demanding immediate negotiations to end the war in Ukraine, and calling for worldwide peace demonstrations on August 6, the 78th anniversary of the U.S. atomic bombing of Hiroshima, Japan—along with the subsequent atomic bombing of Nagasaki two of the most heinous crimes ever committed. That resolution follows.

Strasbourg Resolution

International Call for the August 6 Peace Demonstrations

On the Anniversary of the Hiroshima and
Nagasaki Nuclear Bombings

Seventy-eight years ago, hundreds of thousands died following the Hiroshima and Nagasaki bombings!

**STOP THE IMMINENT DANGER
OF NUCLEAR WAR!**

Gathered at the Schiller Institute conference in Strasbourg July 8 and 9, on the urgent need for peace in Ukraine, the following associations and personalities issued a call to use the 78th anniversary of the nuclear bombings of Hiroshima on August 6 and Nagasaki on August 9 of 1945, to call for an immediate cease-fire in Ukraine and the opening of negotiations aimed at guaranteeing the security interests of all nations in the world.

Never has the danger of nuclear war been higher than today. A possible sabotage of the Zaporizhzhia nuclear power plant could be used as a trigger for a false flag operation, or a pretext for an escalation of the war, crossing the threshold to the use of nuclear weapons. The discussion on the possibility to use nuclear weapons is more and more open in the international news media.

Several agreements for a cease-fire were

struck during May 2022 between Russia and Ukraine, and it was the NATO powers, none of which is threatened by this war, which pressured Ukraine to pursue the war and promised them all the weapons needed to win that war. U.S. and British officials openly stated that this war should be used to destroy Russia once and for all, despite the terrible amount of casualties for the Ukrainians, in particular.

In the meantime, the Vatican, China, Brazil, and several African nations have all presented peace proposals for a cease fire and for negotiations aimed at ensuring the security interests of both nations.

We, the undersigned, call on all the peace movements worldwide and on all peace-loving forces, to demonstrate on August 6th, for an im-

mediate cease-fire and for creating the conditions where never again will nuclear weapons threaten the existence of Mankind.

In the following pages, this issue of *EIR* provides transcripts of three presentations from Panel V of the conference, titled “Scientific Ecology and Assessing the Climate Challenge; Eradicating Poverty and Hunger in the World is the Priority.” The speakers, from Italy and Germany, debunk the fraud of “man-made global warming” and expose the disastrous consequences of the oligarchy’s Malthusian, “climate-change” agenda, an agenda which is already causing mass starvation and disease on a planetary scale.

Panel V in its entirety can be watched [here](#).

Videos of all conference panels are available on the Schiller Institute website [here](#).

Dr.-Ing. Hans-Bernd Pillkahn EU Climate Policy: A Disaster for Energy-Intensive Production

This is the edited transcript of the presentation of Hans-Bernd Pillkahn to Panel V, “Scientific Ecology and Assessing the Climate Challenge; Eradicating Poverty and Hunger in the World is the Priority,” of the Schiller Institute’s July 8–9 conference, “On the Verge of a New World War—European Nations Must Cooperate with the Global South!” Dr.-Ing. Pillkahn is an engineer and CEO of PROASSORT, GmbH in Werdohl Germany. Subheads have been added, and the number of his graphics has been reduced.

look into the climate, and then we’ll have a look at both together in industry.

What is the EU? The European Union (EU) countries cover 4% of the global land area. The EU has a population of about 6% of the global population. The gross domestic product (GDP) value that we create is about 16% of the global value that is currently being created. Therefore, we need a lot of energy. We need 13% of all the wattage that is produced in the world. We need

about 10% of the gas consumption of the world. We need about 12% of the oil consumption of the world. We have a self-supply rate in the EU for gas of 11%. In other words, we produce 11% of the gas that we need. Looking at oil, we have a self-supply of 4%; 4% of the oil that is consumed in the EU, we lift [from the Earth—ed.] ourselves. That is, of course, a strong position for political sanctions. Everybody is clear about that.

Look a little bit into the atmosphere. The air in the Earth’s atmosphere, weighs a total of 5 multiplied by 10^{15} tons. That’s ten with 15 nils [zeros—ed.] tons of air in the atmosphere. I do not know the English ex-

Dear ladies and gentlemen,

Thank you very much for allowing me the opportunity to talk to you today, despite the warm weather. The good news is, in Germany, we are working on a strategy to *defeat* summer. Just wait one or two years. I’m happy to talk to you a bit about the EU climate policy from my personal opinion. Perhaps you [will] agree with me afterward. The EU climate policy is a disaster for energy-intensive industry in its member nations.

Let’s have a look into the EU, and then let’s have a
