

The Cause of the Drought

Many accounts place mediate responsibility for the drought hitting not only Mexico and the U.S., but also the Southern Cone nations of Argentina, Paraguay, and Brazil, on the phenomenon of La Niña—the increased flow of cold water in the eastern reaches of the Pacific Ocean. But La Niña and related weather changes can in turn only be understood scientifically by looking to developments in the Solar System and beyond, as presented in LPAC-TV's "Colombia Rains and Cosmic Rays" (<http://www.larouchepac.com/node/18197>).
