

Behind the Texas Locusts

Lone Star was founded in 1996 by John Grayken, a protégé of Texas billionaire Robert Bass, one of the Bass brothers of Ft. Worth. A quick look at the Bass family milieu provides a snapshot of the synarchist nest which has played a role in controlling the Bush family, as well as the political right-wing in the United States.

The Bass family inherited its money from their uncle, Sid Richardson, the “bachelor billionaire,” and then used their talents to expand that inheritance several times over. Richardson was a real piece of work, part of a network of right-wing kook oilmen who funded Joe McCarthy and his “anti-Communist” witchhunt, the John Birch Society, and, according to some reports, the American Nazi Party.

Richardson and his buddy Clint Murchison were among the people who funded Permindex, the synarchist assassination bureau behind the murder of John F. Kennedy. The manuscript “Nomenclature of an Assassination Cabal,” published under the pseudonym William Torbitt, identified Clint Murchison and “John Connally, as the executor of the Sid Richardson estate,” as among the “principal financiers of Permindex,” along with oilman H.L. Hunt, Schlumberger chief Jean de Menil, Brown & Root founders Herman and George Brown, mob lawyer and McCarthy aide Roy Cohn, and others. Connally, later a Governor of Texas and the Treasury Secretary when the

U.S. government opened the door to the barbarians by taking the dollar off gold in 1971, was, with de Menil, a member of the infamous Tryall club in Jamaica, founded by intrepid British intelligence agent William Stephenson.

That such a collection of nasties would be found in Texas is lawful, given the state’s status as a virtual colony of the Anglo-Dutch imperium, dating back to the days of the founding of the King Ranch, the fascist political operations of the infamous Col. E.M. House, and the geopolitical colossus known as the London-centered oil cartel. The King Ranch and its adjunct, the Armstrong Ranch, have played host to some of the best-known oligarchs in the world, such as Britain’s Prince Charles, and some of the most powerful, such as the late Johannes von Thurn und Taxis, a Prince of the Holy Roman Empire, whose family is the hereditary head of Venetian intelligence. The Ranch’s resident spook (and former U.S. Ambassador to Britain), Anne Armstrong, played a major role in the rise of the Texas Republican Party and the political career of George H.W. Bush. It was at the Armstrong Ranch, not coincidentally, that Vice President Dick Cheney mistook his hunting partner for a quail, and it was former Halliburton director Armstrong and her daughters who decided to release the information to the public, well after the fact.

This synarchist cell, steered by the oligarchy’s private intelligence apparatus and funded by the oil cartel, is what created the right-wing nuts like Sid Richardson as a political force, and what is behind the Texas locusts.
